B3 — Final Talent Tree UX

Built on B2.1 (maximum canvas) with the B2.2 header. Tapping a node only selects it. Every spend and refund is a visible button. The inspector is hidden until you select something. Show is how you move from a locked talent to its prerequisite. Portrait is 360 × 760 dp; landscape is 760 × 360 dp. Build: Warrior · Forever, Arms 13 · Fury 5, 18 / 51.

Border = can I reach it

Solid means reachable now. Dashed means locked. Dimmed solid means reachable but no points left.

Fill + chip = what I spent

Outline chip, then a filled class-accent chip, then a light chip on a solid fill with a double rim. The accent appears only on points you have invested.

Chip glyph = why it's locked

Lock = tier gate (a dashed gate line crosses that tier). ↑ = a prerequisite talent is missing (a dashed line leads into it).

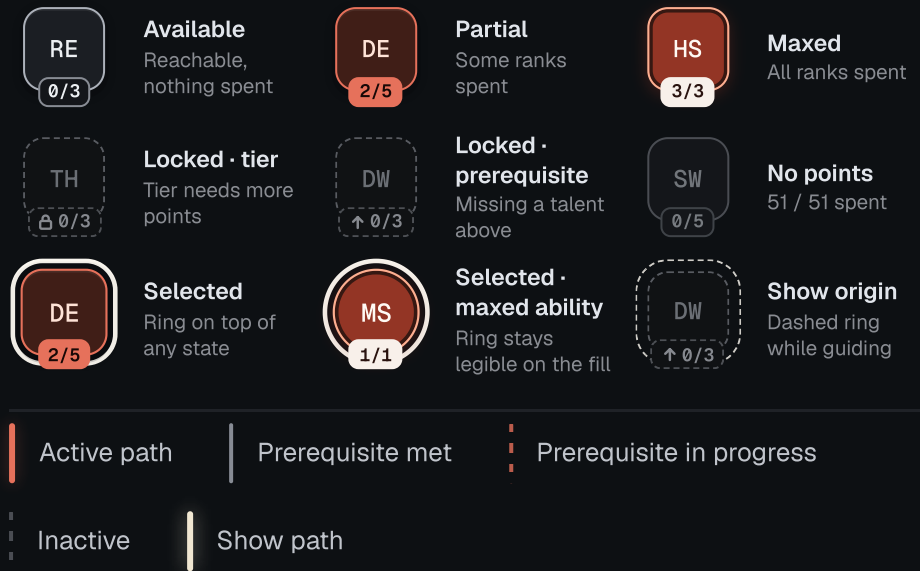

Ring = focus

A neutral white ring with a 3 dp gap sits on top of any state, and the node scales up 6%. A dashed ring marks the talent that Show came from.

Node state language

COLOUR

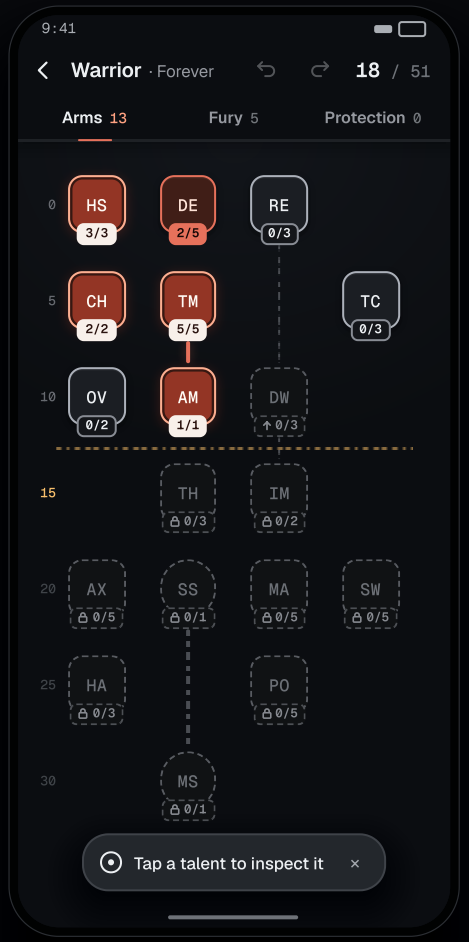

GRAYSCALE CHECK — EVERY STATE STILL READS

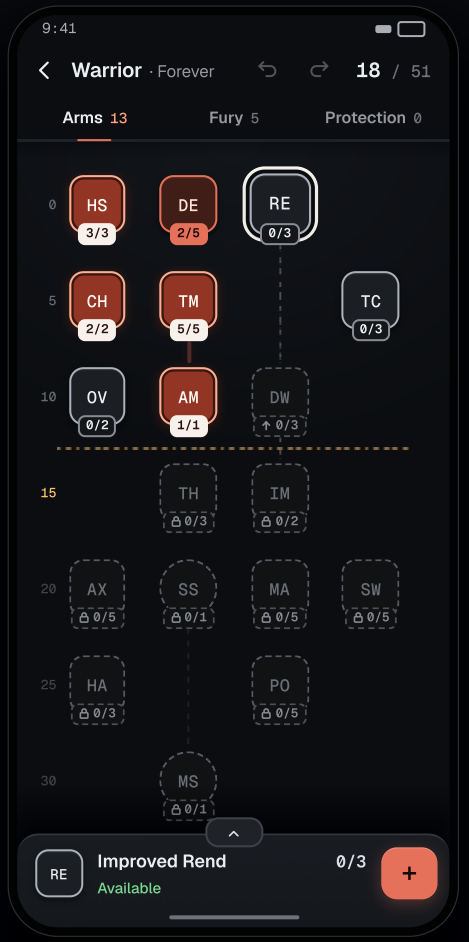

Portrait interaction states · 360 × 760 dp

01 Nothing selected

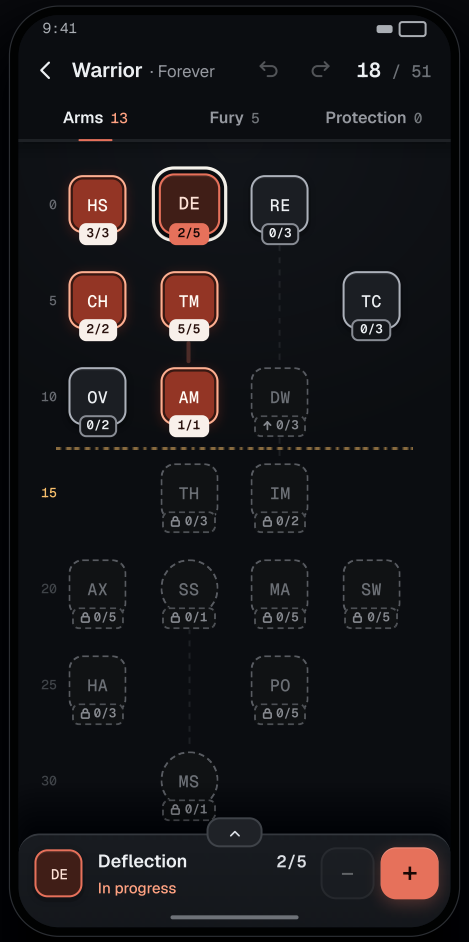

No inspector at all, so the canvas gets 656 dp. On the first visit only, a coachmark appears; the first selection (or ×) dismisses it for good.

02 Available · 0/3

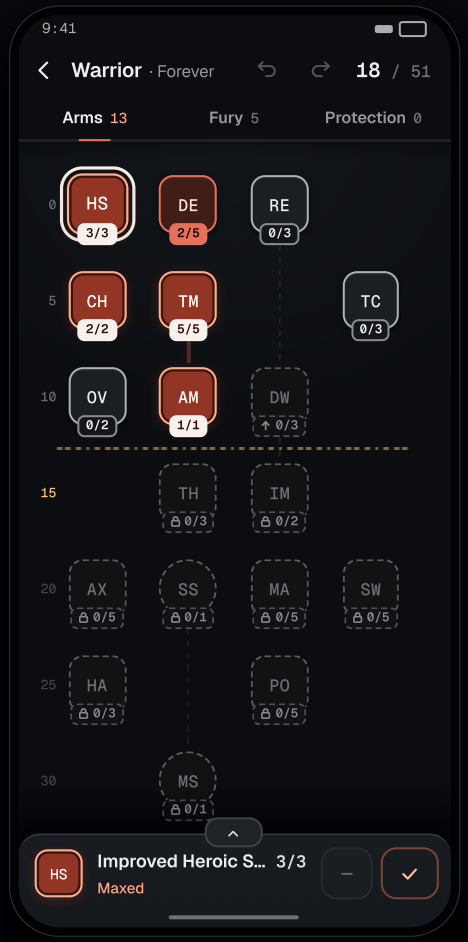

One action: + (48 dp, class accent). Tap the name or the chevron tab to expand. Try + three times and watch Deep Wounds unlock.

03 In progress · 2/5

– and + sit side by side, so refunding never needs the sheet. There is no Max in the compact bar.

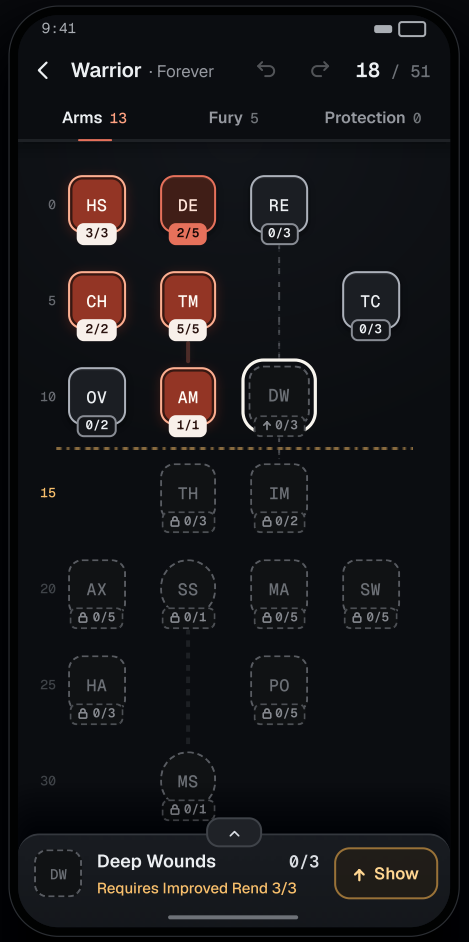

04 Maxed · 3/3

+ becomes a check badge (not a button). – stays available. The node shows a solid fill, a double rim and a light chip.

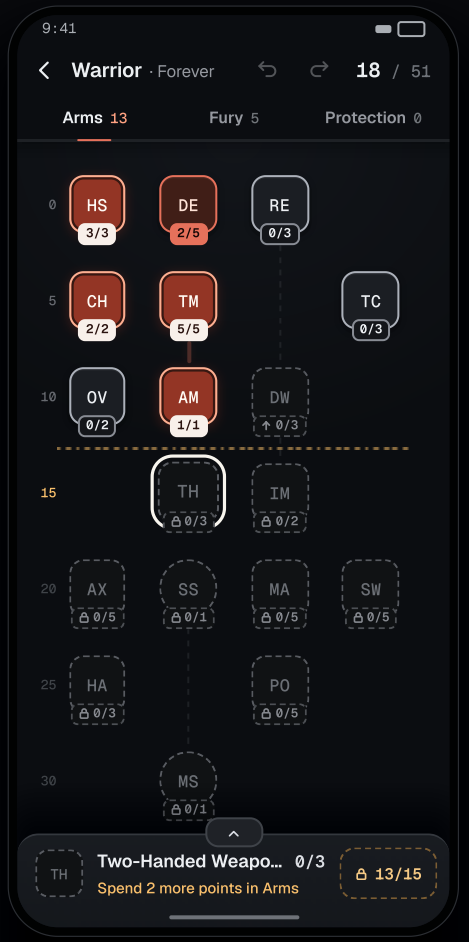

Portrait interaction states · continued

05 Locked · prerequisite

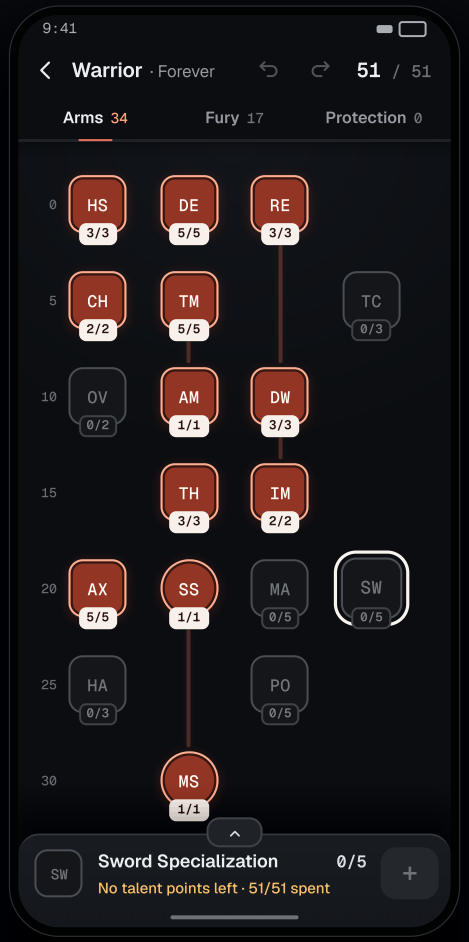

The reason is spelled out in words, with Show as the only action. Nothing can be spent here.

06 Locked · tier points

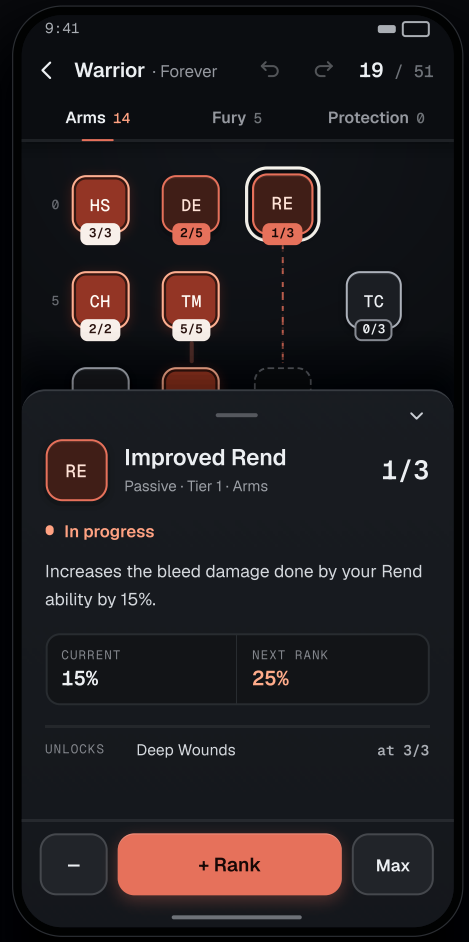

There is no single node to point to, so there is no Show button. A non-interactive meter reports 13/15 Arms points, and the gate line marks the tier.

07 No points remaining

The build is at 51 / 51. + is shown disabled and the state line explains why. Refund still works on any talent with ranks.

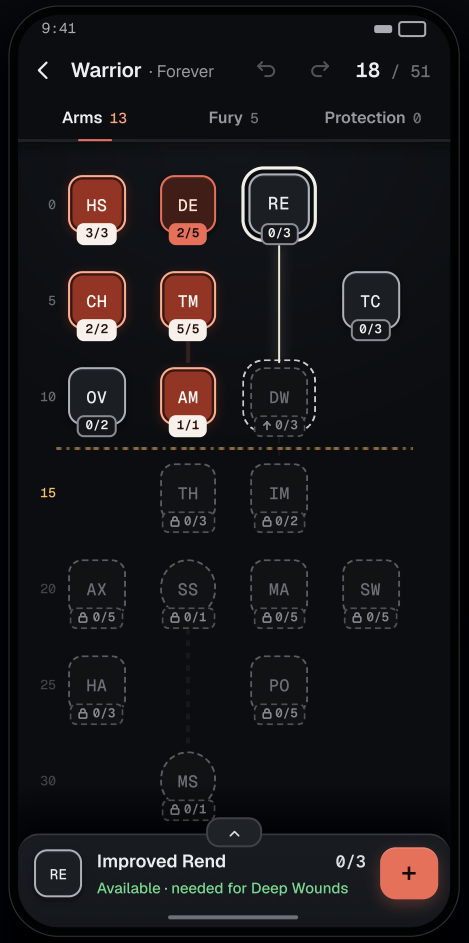

08 Expanded inspector

The sheet opens over the canvas. The canvas pans only if the selected node would be covered (here it does not need to). Collapsing never moves the canvas.

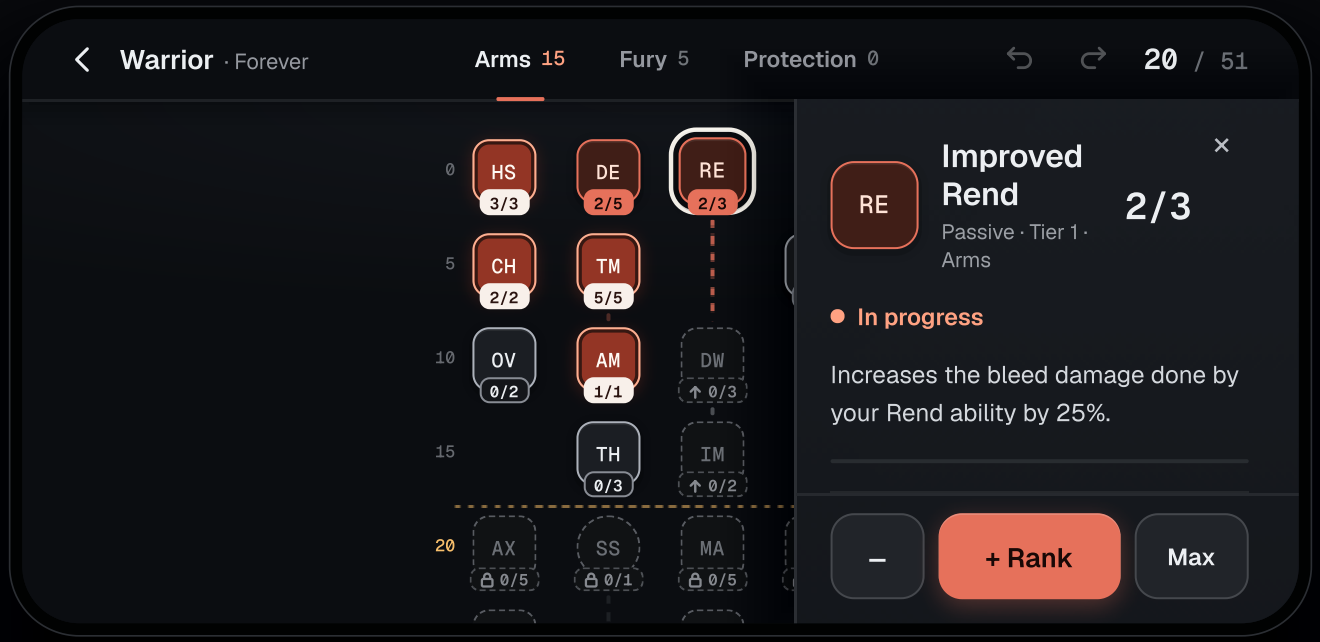

After Show

09 After Show

Deep Wounds → Show selects Improved Rend and pulses it once. The path between them turns bright, other lines fade to 18%, and Deep Wounds keeps a dashed target ring. No points were spent.

Landscape · 760 × 360 dp · Improved Rend 2/3 selected

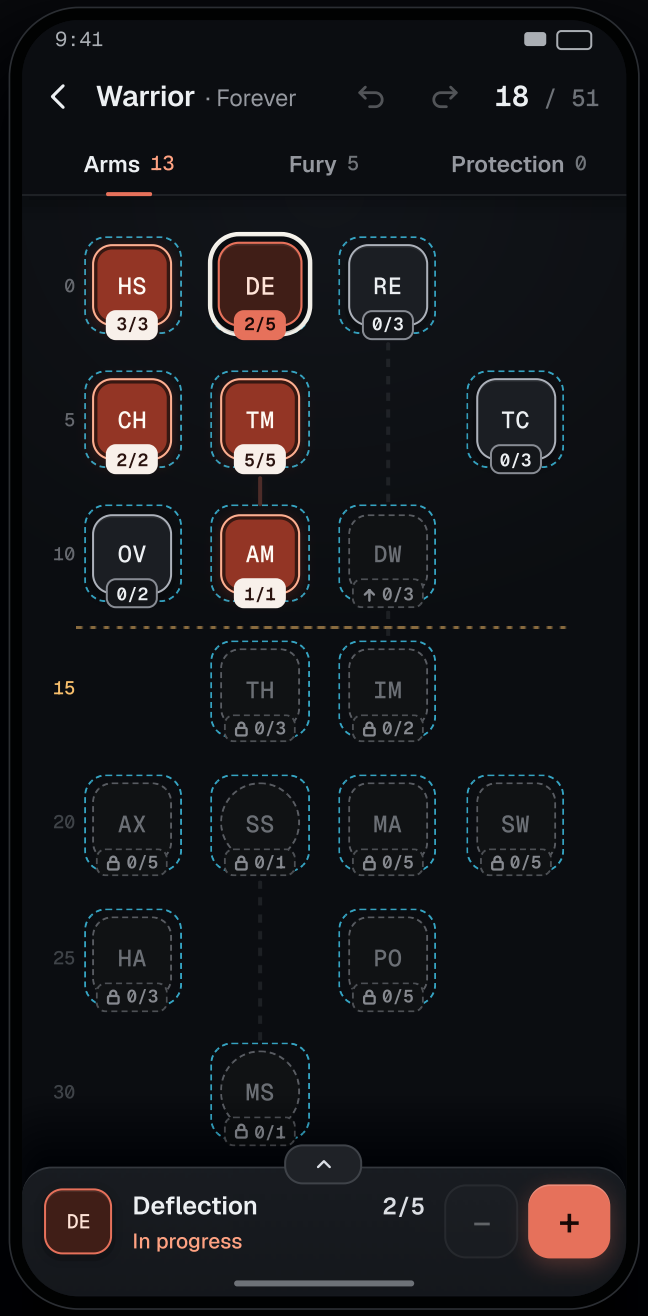

Header · The two portrait rows merge into one 48 dp bar: title, spec tabs centred, undo / redo, 18 / 51. The status bar is hidden.

Canvas · Nodes are 38 dp with 48 dp targets, on a 62 × 56 dp grid. Drag vertically for tiers 6–7. The canvas moves only if the panel would cover the selected node.

Inspector · Selecting opens a 300 dp side panel with the full detail. There is no compact state. × or tapping empty canvas deselects.

Unchanged · The gestures, states, Show behaviour and button set are exactly the same as in portrait.

Density and touch targets

Blue dashed boxes are the real tap targets. None of them overlap, so no tap can hit two nodes.

NODE	48 dp visual. Radius 12 dp for passives; circles for abilities.
TARGET	56 × 56 dp, centred on the node.
GRID	76 dp columns, 80 dp tiers. That leaves 20 dp between targets horizontally and 24 dp vertically.
SELECTION RING	3 dp gap + 2.5 dp ring + 6% scale ≈ 7 dp outset. At least 14 dp stays clear to the nearest neighbour.
RANK CHIP	15 dp tall, 10.5 sp mono, overlapping the node's bottom edge by 8 dp. Connections start below the chip.
CONNECTIONS	3 dp solid for the active path, 2 dp solid when the prerequisite is met, 2 dp dashed when inactive. Lines fade to 30% with a selection and to 18% during Show.
CHROME	Header 44 + spec row 36 = 80 dp. Compact inspector 64 + 14 dp inset. Buttons 44 × 44 dp (+ is 48 × 44). Expanded sheet 448 dp.
CANVAS	656 dp idle (86% of the screen). With the compact inspector open, the whole Arms tree still fits at 1×.

Specification summary

Final gestures

- Tap a node: select it. Never spends.
- Tap empty canvas: deselect.
- Drag anywhere on the canvas: pan. A 7 dp slop keeps taps as taps.
- Pinch: zoom 0.8–2.2× around the fingers. FIT appears once the view has moved away from the default.
- There is no long-press, double-tap or swipe between specs.

Final node states

- Available: solid outline, empty chip.
- Partial: accent tint, filled accent chip.
- Maxed: solid fill, double rim, light chip.
- Locked · tier: dashed border, lock chip, gate line on the tier.
- Locked · prerequisite: dashed border, ↑ chip, dashed line leading in.
- No points: dimmed solid border.
- Selected: white ring + 6% scale, layered on any state.

Inspector states

- Hidden when nothing is selected.
- Compact (64 dp) buttons by state: Available [+], Partial [– +], Maxed [– ✓], Prerequisite [Show], Tier [lock meter], No points [– if ranked, + disabled].
- Expanded sheet (448 dp): description, current / next, requirements, unlocks, – · + Rank · Max.
- Landscape: 300 dp side panel with the full detail.
- A blocked refund shows its reason in the state line for 2.6 s.

Prerequisite navigation

- Show selects the direct prerequisite, one hop only. If that talent is also locked, its own inspector offers Show again.
- The canvas stays still if the target is fully visible above the inspector; otherwise the target is centred (300 ms ease-out).
- The target gets a ring and a 900 ms pulse. The path between them turns bright neutral at 3 dp, others fade to 18%, and the origin keeps a dashed ring.
- The state line reads "Available · needed for Deep Wounds".
- The next selection, a deselect or a spec change clears it. Show never spends.

Specification summary · continued

Dimensions & targets

- Node 48 dp; target 56 dp; grid 76 × 80 dp; no overlapping targets.
- All buttons at least 44 × 44 dp; + is 48 × 44.
- Header 44 + spec row 36 dp. Compact inspector 64 + 14 dp inset.
- Landscape: node 38, target 48, grid 62 × 56 dp.
- Minimum text: 10.5 sp for rank chips, 12.5 sp for state lines.

Portrait behaviour

- Undo, redo and 18 / 51 in the header. Per-spec totals appear only in the spec row.
- The whole spec fits at 1× with the compact inspector open; zoom is for bigger trees or precision.
- Expanding pans the canvas the minimum amount needed, and only when the node would be covered. Collapsing leaves the canvas where it is.
- Purchase: 260 ms accent glow, the rank chip pops to 1.2×, the connection lights up, and a light haptic.

Landscape behaviour

- One 48 dp header holding the title, tabs, undo / redo and points.
- Selecting opens the side panel; the canvas shifts left only if the panel would cover the node.
- Tiers 6–7 are reached by dragging vertically.
- Same gestures and actions as portrait.

Open questions

- Landscape at 38 dp nodes and a vertical pan vs fitting the whole tree at around 30 dp. Needs a usability check.
- Should Show on a multi-hop chain (Impale → Deep Wounds → Improved Rend) jump straight to the root?
- Coachmark scope: once per install, or again after major updates?
- Expert shortcut: accelerated spend by holding + (always optional)?
- Long names truncate at about 150 dp in the compact bar. Allow two lines at large text sizes?
- Haptic mapping per platform: spend, blocked refund, maxed.
- Should the guide state time out, or last until the next interaction (current)?
